

Physics 123 Homework Solutions

Week #1 Unit O Geometric Optics

O4.1

$$\frac{1}{d_{o1}} + \frac{1}{d_{i1}} = \frac{1}{f_1} \rightarrow \frac{1}{d_{i1}} = \frac{1}{f_1} - \frac{1}{d_{o1}} = \frac{1}{50\text{cm}} - \frac{1}{70\text{cm}} = 0.0057\text{cm}^{-1} \rightarrow d_{i1} = 175\text{cm}$$

Thus, $d_{o2} = -75\text{cm}$ (it is 175cm from lens 1, and lenses 1 and 2 are separated by 100cm.)

Therefore this is a virtual object.

$$\frac{1}{d_{o2}} + \frac{1}{d_{i2}} = \frac{1}{f_2} \rightarrow \frac{1}{d_{i2}} = \frac{1}{f_2} - \frac{1}{d_{o2}} = \frac{1}{30\text{cm}} - \frac{1}{-75\text{cm}} = 0.047\text{cm}^{-1} \rightarrow d_{i2} = 21.4\text{cm}.$$

This image is a virtual image since it is located on the same side of the lens as the object.

$$M_{\text{total}} = M_1 M_2 = \left(-\frac{d_{i1}}{d_{o1}} \right) \left(-\frac{d_{i2}}{d_{o2}} \right) = \left(-\frac{175}{70} \right) \left(-\frac{21.4}{-75} \right) = -0.71$$

Thus the final image is virtual, inverted wrt original object and reduced in size. It is located at $70\text{cm} + 100\text{cm} + 21.4\text{cm} = 191.4\text{cm}$ to the right of the original object.

O4.2

NOTE: This drawing does not correspond to the mathematics given above. I'll fix the drawing or mathematics in the morning.

O4.9

$$\frac{1}{d_{o1}} + \frac{1}{d_{i1}} = \frac{1}{f_1} \rightarrow \frac{1}{d_{i1}} = \frac{1}{f_1} - \frac{1}{d_{o1}} = \frac{1}{25\text{cm}} - \frac{1}{40\text{cm}} = 0.015\text{cm}^{-1} \rightarrow d_{i1} = 66.7\text{cm}$$

Thus, $d_{o2} = d - d_{i1} = 100\text{cm} - 66.7\text{cm} = 33.3\text{cm}$ (to the left of lens 2.)

Therefore this is a real object.

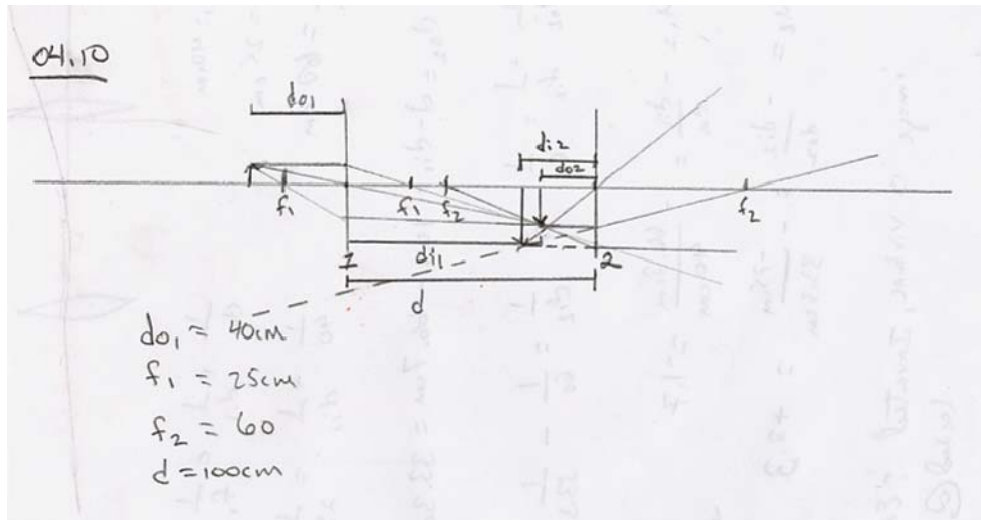

$$\frac{1}{d_{o2}} + \frac{1}{d_{i2}} = \frac{1}{f_2} \rightarrow \frac{1}{d_{i2}} = \frac{1}{f_2} - \frac{1}{d_{o2}} = \frac{1}{-15\text{cm}} - \frac{1}{33.3\text{cm}} = -0.097\text{cm}^{-1} \rightarrow d_{i2} = -10.3\text{cm}.$$

This image is a virtual image since it is located on the same side of the lens as the object.

$$M_{\text{total}} = M_1 M_2 = \left(-\frac{d_{i1}}{d_{o1}} \right) \left(-\frac{d_{i2}}{d_{o2}} \right) = \left(-\frac{66.7}{40} \right) \left(-\frac{-10.3}{33.3} \right) = -0.53$$

Thus the final image is virtual, inverted wrt original object and reduced in size. It is located at $40\text{cm} + (100\text{cm} - 10.3\text{cm}) = 129.7\text{cm}$ to the right of the original object.

O4.10

O4.15

$$\frac{1}{d_{o1}} + \frac{1}{d_{i1}} = \frac{1}{f_D} \rightarrow \frac{1}{d_{i1}} = \frac{1}{f_D} - \frac{1}{d_{o1}} = \frac{1}{-25\text{cm}} - \frac{1}{100\text{cm}} = -0.14\text{cm}^{-1} \rightarrow d_{i1} = -7.1\text{cm}$$

Thus, this is a virtual image and, $d_{o2} = d + d_{i1} = 20\text{cm} + 7.1\text{cm} = 27.1\text{cm}$ (to the left of lens 2.)

$$\frac{1}{d_{o2}} + \frac{1}{d_{i2}} = \frac{1}{f_C} \rightarrow \frac{1}{d_{i2}} = \frac{1}{f_C} - \frac{1}{d_{o2}} = \frac{1}{25\text{cm}} - \frac{1}{27.1\text{cm}} = -0.003\text{cm}^{-1} \rightarrow d_{i2} = 337.5\text{cm}.$$

This image is a real image since it is located on the opposite side of the lens as the object.

$$M_{\text{total}} = M_1 M_2 = \left(-\frac{d_{i1}}{d_{o1}} \right) \left(-\frac{d_{i2}}{d_{o2}} \right) = \left(-\frac{-7.1}{10} \right) \left(-\frac{337.5}{27.1} \right) = -12.5$$

Thus the final image is real, inverted wrt original object and enlarged in size. It is located at $337.5\text{cm} + 20\text{cm} + 10\text{cm} = 367.5\text{cm}$ to the right of the original object.
