Eco 352 Eshragh Motahar SEMINAR: CONTEMPORARY PROBLEMS IN MACROECONOMICS Winter 2026

This course operates under two fundamental principles: transparency and accountability. Every effort will be made to adhere to the terms of this syllabus. However, changes and adaptations might have to be made

OFFICE INFORMATION

Hours: Tuesdays and Thursdays, 4:00-5:30 PM. For appointments, please sign up here,

or contact me via e-mail or voice mail.

under potential force majeure circumstances. I will give you written notice of those changes.

Location: Lippman Hall 218 Telephone: 518.388.6065

E-mail: motahare@union.edu

A. COURSE DESCRIPTION

Up until COVID hit us, the economic and financial crisis of 2008 had been characterized by many as the worst that the U.S. had experienced since the Great Depression of the 1930s. The objective of this course is to use analytical tools of modern macroeconomics to gain a deep understanding of some of the causes and consequences of that crisis, to explore some relevant policy options, and to examine the consequences of all of this for current macroeconomic issues and policy debates. While major geopolitical and geo-economic events are occurring, and the effects of AI are being increasingly felt, it is difficult to get a full picture of what is happening, and might happen to the macroeconomy. However, we will attempt to provide an analysis. Subjects that we will study in this course include:

1. **Growth and Productivity**. What factors account for long-run economic growth? After many years of slow productivity growth, the U.S. appeared to enter a new era of sustained resurgent productivity growth in the 1990s. In the mid to late 90s commentators were hailing the boom in some western economies as the dawn of a "New Economy." Near the end of the 90s, with the U.S. economy slowing down, dot.coms folding, and information and telecommunication technology firms feeling the pinch globally, some were saying that the "New Economy" was all a myth. Was it? What has been the nature of U.S. growth and productivity since the late 90s? Overall, this segment of the course provides us with the necessary long-term benchmark against which we can better assess and analyze the various aspects of recent macroeconomic events and crises.

2. Causes and Consequences of the Global Financial Crisis, and the Current Situation

2a. Causes. In this segment we will try to make sense of the details of the modern 'financial architecture' that turned a predictable burst in the U.S. housing bubble, traceable to the subprime mortgage phenomenon, into a full-scale financial meltdown. We will augment the standard *IS/LM/PC* framework in macroeconomics to study the relevant problems. We will examine whether there were remediable 'mistakes' made on the part of financial institutions, regulators, or policy-makers, or are the root causes deeper and more difficult to address. We will ask a similar set of questions with regard to the recent COVID-triggered crisis, as well as crises caused by current geopolitical and geo-economic events.

2b. Consequences/Policy Options. We will examine some of the policies that were proposed and/or implemented to address the GFC. In addition, we will examine policies that have been proposed to address the current crises. An important issue to investigate would be: did the weaknesses in the US economy (structural and/or otherwise) surrounding the GFC and its aftermath contribute to the recent COVID-triggered macroeconomic problems in the US. In both segments 2a and 2b we will also examine concepts such as financialization, zombie companies, liquidity trap, moral hazard, asymmetric information, adverse selection, supply chain issues, etc. Also, we will examine the effects of increasing income and wealth inequality, lack of universal healthcare, and of "trade wars," as well as other wars, on macroeconomic performance. In all segments of the course, we will analyze developments on the AI front as well.

B. READING

Reference Textbook: we will use Olivier Blanchard's *Macroeconomics*, 9th edition, Pearson, 2025, as the basic reference textbook.

- There will be a substantial number of required readings assigned from professional journals and other sources. Specific reading assignments for each of the above two subject areas will be given to you in separate handouts, and posted at the course's website.
- The following books are highly recommended as optional reading:
 - -Carlin, Wendy and Soskice, David, *Macroeconomics: Institutions, Instability, and Inequality*, Second Edition, Oxford University Press, 2024.
 - -Stiglitz, Joseph, *People, Power, and Profits: Progressive Capitalism for an Age of Discontent*, W.W. Norton, 2020.
 - -Tooze, Adam, Crashed: How a Decade of Financial Crises Changed the World, Viking, 2018.
 - -Piketty, Thomas, *Capital in the Twenty-First Century*, The Belknap Press of Harvard University Press, 2014.

C. COURSE REQUIREMENTS, GRADING POLICY and RELATED MATTERS

There will be one **executive summary**, one **oral presentation**, one **term paper**, and two **examinations**, as follows:

Executive Summary. During the course of the term, you are required to write one executive summary on a topic chosen from one of the above subject areas (1 or 2). Your executive summary will be at most three pages long¹ (references, charts or graphs, or other ancillary material may be put onto additional pages).

The Executive Summary for **Subject Area 1** is due on Thursday, January 22. The Executive Summary for **Subject Area 2** is due on Thursday, February 26.

_

¹Typed, double-spaced, one-inch margins all around, Times New Roman 12-point font.

Presentation. You are required to make an oral presentation to the class, and be prepared to answer questions, corresponding to your term paper. You will be allocated a 25-minute time slot for this purpose. Presentations will take place during the 3/3-3/12 period. You may sign up for your presentation slot here.

Term Paper. A term paper of no more than eight pages in length¹ (exclusive of graphs, charts, data appendices, *etc.*), is due on *Thursday*, *March* 19th, *at* 4:00 pm. You should choose a topic from a subject area in which you will **not** have written an executive summary.

Submission of the Executive Summary and the Term Paper. You may, if you wish, submit your executive summary and/or your term paper earlier than the above due dates. Submission of the executive summary is due at the beginning of class. All submissions must be made electronically: **e-mail them to me in the pdf format**. Late submissions will be subject to a penalty of one point per hour (or a fraction thereof).

Detailed instructions for the executive summary, the presentation, and the term paper are provided <u>here</u>.

Examinations

There will be two examinations, each corresponding to one of the two subject areas. The schedule is as follows:

Examination 1	Thursday, 1/22 at the beginning of class, 45 minutes
Examination 2	Thursday, 2/26, the entire class period

There will be *no* time extensions for the examinations. For detailed information about the examinations, see the course's website.

Other Matters

a. The contribution of each of the above, plus attendance and class participation, towards your course grade is as follows:

Executive summary 129	
Oral Presentation 149	%
Term Paper 309	%
Examination 1 129	%
Examination 2 249	%
Attendance and participation 8%	

b. **Professional Conduct**. You are required to adhere to the following professional code of conduct during classroom sessions. It is in your best interest to **drop this course** if you are unable and/or unwilling to adhere to this code. "In order for everyone to benefit from the educational process in an appropriate environment, adherence to professional conduct during classroom sessions is expected. Eating, late arrival, leaving the classroom while it is in progress, conversation which interferes with session activity, and similar unprofessional conduct is not acceptable. **Such conduct will lead to point deductions** (one point per occurrence) from your course grade." *The use of any electronic devices is not allowed* unless you obtain prior permission from me. Unauthorized use of electronic devices will be subject to the same penalty points as above. (Electronic

devices include, but are not limited to: cellphones, laptops, notebooks, iPads and iPad-like devices, Apple watches, etc.) The recording of lectures in any format is strictly prohibited.

c. **Honor Code**. The College's Honor Code is now in effect. "Union College recognizes the need to create an environment of mutual trust as part of its educational mission. Responsible participation in an academic community requires respect for and acknowledgement of the thoughts and work of others, whether expressed in the present or in some distant time and place.

Matriculation at the College is taken to signify implicit agreement with the Academic Honor Code, available at honorcode.union.edu. It is each student's responsibility to ensure that submitted work is his or her own and does not involve any form of academic misconduct. Students are expected to ask their course instructors for clarification regarding, but not limited to, collaboration, citations, and plagiarism. Ignorance is not an excuse for breaching academic integrity. Students are also required to affix the full Honor Code Affirmation, or the following shortened version, on each item of coursework submitted for grading: "I affirm that I have carried out my academic endeavors with full academic honesty." [Signed, Jane Doe]"

- d. **Accommodative Arrangements.** Any student with a documented disability needing academic adjustments or accommodations is **required** to notify me, **and to make the necessary arrangements with me**, by no later than **5:00 PM**, **January 16th**, **2026**. Notifications received after this date will *not* be accommodated (unless a case is made as to why the deadline was not met). All discussions will remain confidential.
- e. **Library Resources**. The library is available to help you with your research needs! Librarians can help you develop research questions, search for and select the best sources for your projects, identify research strategies, evaluate sources, and assist you with creating citations. There are multiple ways for you to contact a librarian. For more information, please see our Ask A Librarian page (https://www.union.edu/schaffer-library/ask-a-librarian).
- f. **Policy on AI**. This is from colleagues at the University of Illinois, Chicago: "Generative AI cuts out process, but thinking is process. Shortcuts degrade quality: LLM [Large Language Model] outputs, simulations of training data found on the internet, are inaccurate and often biased. This technology, heavily promoted by big money, relies on stolen property and exploited laborers, and exacts significant environmental costs. Evidence is also rolling in that the tools are bad for brain functioning. All these negative impacts for something that is only, as the sociologist of technology Dr. Tressie McMillan Cottom says, "mid." Using LLMs makes your work bland, vague, and wrong, and impedes the development of skills. *Building skills as a thinker, reader, and writer* equips you for success as a professional, for participation as a citizen, and for *fulfillment as a human*. That development only happens with sweat, practice, [poor] first drafts, errors, time, and revision. Your work in this course should be made by you not someone you pay and not a bot – and work not made by you will be considered an academic integrity violation and evaluated accordingly. Similarly, all lectures, assignments, feedback, and grades will be made by me without AI, nor will any of your intellectual property be fed to tools that train AI. Ideas are social, so let's make them together." [Emphasis added.]

₩ WARNING

- 1. Given the nature of the course, procrastination could prove very costly. So, plan already! There are no bail-out provisions in this course!
- 2. Based on warning 1 above, it is absolutely essential that you keep up-to-date with the material covered and to do the various course requirements in a gradual fashion, starting from day one. In this spirit, there will be **no review sessions** prior to any of the examinations. Based on my experience in the past, review sessions could lead to moral hazard and free-rider problems. They may be counterproductive and work against the recommendations stated here. I am, of course, available throughout the term to help you with any questions or problems you might have regarding the course. Please do not hesitate to make an appointment to see me, if you need any help.

★ This is a *WAC* course.

Growth and Productivity

Reading Assignment

Required

Basic

1. Blanchard 9th edition, chapters 10-12 (including appendices to chapters 11 and 12).

Group 1

- 2. Dizikes, Peter, "What do we know about the economics of AI?" MIT News, December 6, 2024. Here.
- 3. Hernandez, Fredrick, et al, "AI and the US Economy: Optimism, Pessimism, or Realism?" *Third Way*, January 31, 2024. Here.
- 4. Baker, Dean, "Quick Thoughts on AI and Electricity." *Center for Economic Policy Research*, August 19, 2025. Here.
- 5. Manning, Sam, "AI's impact on income inequality in the US." *Brookings*, July 3, 2024. <u>Here</u>.
- 6. Korinek, Anton, "Steering AI to Enhance Jobs and Prepare for Future Transformation." *Institute for New Economic thinking*, May 29, 2025. Here.
- 7. [transitioning to groups 2 and 3] "In Conversation with Gabriel Zucman." *Washington Center for Equitable Growth*, August 7, 2019. Here. [For an update on Zucman check here.]

Group 2

- 8. Barber II, William J., et al, "Moral policy = Good economics: Lifting up poor and working-class people—and our whole economy." *Economic Policy Institute*, October 27, 2021. Here. [This article overlaps with those in *Group 3*.]
- 9. Bivens, John, and Mishel, Lawrence, "Understanding the Historic Divergence Between Productivity and a Typical Worker's Pay: Why It Matters and Why It's Real." *Economic Policy Institute*, September 2, 2015. Here; plus, the 2022 update here.

Group 3

- 10. Stiglitz, Joseph E., "The Ethical Economist." *Foreign Affairs*, November/December 2005 [review of the book: Friedman, Benjamin, *The Moral Consequences of Economic Growth*, Knopf, 2005.] <u>Here</u>.
- 11. De La Maisonneuve, Christine, et al, "Quantifying the macroeconomic impact of COVID-19-related school closures on human capital." *CEPR*, January 24, 2023. <u>Here</u>. [Full paper <u>here</u>.]
- 12. Filippucini, Francesco, et al, "Opportunities and Risks of Artificial Intelligence for Productivity." *International Productivity Monitor*, Spring 2025. <u>Here</u>.
- 13. Storm, Servaas, "The AI Bubble and the U.S. Economy: How Long Do "Hallucinations" Last?" *Institute for New Economic Thinking*, October 2, 2025. <u>Here</u>.

- 14. Bashir, Noman, *et al*, "The Climate and Sustainability Implications of Generative AI." *An MIT Exploration of Generative AI*, March 27, 2024. Here. [For context and summary, make sure to read this first.]
- ▶ Please note: there is a lot of overlap among these papers. This is deliberate. More papers may be assigned as appropriate.

SEMINAR: CONTEMPORARY PROBLEMS IN MACROECONOMICS

Eshragh Motahar Winter 2026

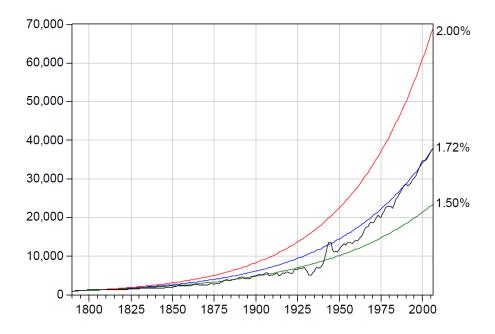

U.S. Economic Growth: Historical Perspectives

Average Annual Real GDP and Real GDP Per Capita Growth Rates

Years	GDP	GDP Per Capita
1947-50	4.02	2.25
1951-60	3.60	1.80
1961-70	4.27	2.96
1971-80	3.16	2.04
1981-90	3.31	2.13
1991-00	3.44	2.19
2001-10	1.76	0.82
2011-20	1.91	1.21
2021-25	3.23	2.61
1947-2025	3.11	1.97
2007-2025	1.96	1.25

Source: BEA/FRED. GDP data are in chained 2017 dollars. FRED codes: for real GDP, gdpc1; for per capita real GDP, A939RX0Q048SBEA. The formula used to calculate the average annual growth rates is based on BEA's method, here.

Real GDP per Capita 1790-2006¹

¹The data are from Louis D. Johnston and Samuel H. Williamson, "The Annual Real and Nominal GDP for the United States, 1790 - Present." *Economic History Services*, July 27, 2007; <u>here</u>. The data are in 2000 dollars. Real GDP per capita in 1790 was \$916; in 2006 it was \$37,807. The average annual rate of growth of real GDP per capita for the above period was 1.72%.

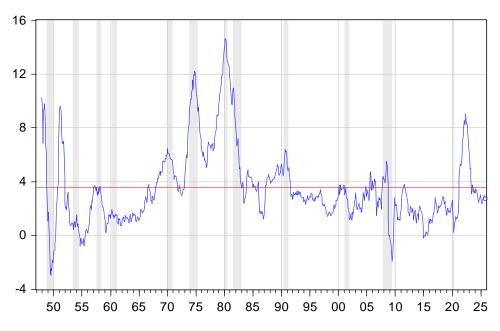

Eshragh Motahar Winter 2026

U.S. Inflation and Unemployment

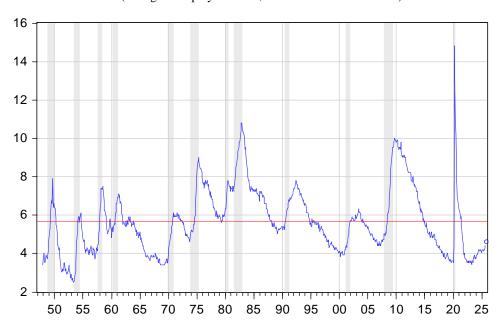

"Inflation" is annual percentage change in CPI, all urban consumers. "Unemployment" is for all workers 16 years and over.

Source: BLS/FRED. Codes: for CPI-U all items (82-84 = 100, SA), cpiaucsl; for unemployment rate (SA), unrate.

U.S. Inflation Rate (average annual rate, 1948.01 - 2025.11 = 3.52%)

U.S. Unemployment Rate (average unemployment rate, 1948.01 - 2025.11 - 5.67%)

[1C]

Eco 352
CONTEMPORARY PROBLEMS IN MACROECONOMICS

Eshragh Motahar

The Solow Growth Model

• Version 1: No population growth, no technological progress

Consider the following production function in which *Y* is real GDP, *K* is the capital stock, and *N* is the labor force:

$$Y = F(K, N). \tag{1.1}$$

Assume that the above is a constant-returns-to-scale production function. We can, therefore, write (1.1) as:

$$Y/N = F(K/N,1).$$
 (1.2)

Let $y \equiv Y/N$, and $k \equiv K/N$. We can then re-write (1.2) as:

$$y = f(k). (1.3)$$

Assume that this is a closed economy with no government. Now, demand for goods and services in this economy can be written as:

$$y = c + i. (1.4)$$

Where c and i are consumption per worker and investment per worker, respectively. In the Solow model consumers save a fraction s of their income. Therefore,

$$c = (1 - s)y. (1.5)$$

Consequently, from (1.5), (1.4) can be written as

$$y = (1 - s)y + i. (1.6)$$

Now, by a simple re-arrangement of terms in (1.6), we get:

$$i = sy. (1.7)$$

Now, assume that the depreciation rate of capital is δ . Keeping in mind that sy in (1.7) can be

written equivalently as sf(k), the change in the capital stock (per worker) can then be written as:

$$\Delta k = sf(k) - \delta k. \tag{1.8}$$

The steady-state value of k, denoted by k^* , is given by (1.8), when Δk is set to zero.

The Golden Rule level of capital

The steady-state value of k that maximizes c is called the Golden Rule level of capital.

Policymakers may be able to choose s such that, in steady state, c is maximized. Now, note that in steady state

$$c^* = f(k^*) - \delta k^*. \tag{1.9}$$

A necessary condition for maximum c^* is

$$f'(k^*) - \delta = 0 \tag{1.10}$$

So, to find the *Golden Rule saving rate*, the following two equations, derived from (1.8) and (1.10), must be solved:

$$sf(k^*) = \delta k$$
 and $f'(k^*) = \delta$. (1.11)

Some highlights of the Solow model:

- 1. At the steady state, the (per capita GDP) growth rate is zero.
- 2. When $k < k^*$ positive growth takes place (and vice versa).
- 3. An increase in *s* will lead to short-term positive growth. The steady-state growth will be zero but at a higher *y*.

• Version 2: Positive population growth, no technological progress

Now, let population and labor force grow at a constant rate g_N . Equation (1.8) must now be rewritten as

$$\Delta k = sf(k) - (\delta + g_N)k. \tag{2.1}$$

The steady-state condition is

$$sf(k) - (\delta + g_N)k = 0. \tag{2.2}$$

And the Golden Rule saving rate can be derived by solving (2.2) and

$$dc^*/dk = d[f(k^*) - (\delta + g_N)k^*]/dk = 0 \implies f'(k^*) = (\delta + g_N).$$
 (2.3)

An additional insight in this version of the Solow model is that, all else equal, a country with a high rate of population growth will have a low steady state k, and therefore a low level of y.

• Version 3: Positive population growth, positive technological progress

Re-write the production function in (1.1) as

$$Y = F(K, A \times N). \tag{3.1}$$

Where A is the efficiency of labor, and the term $A \times N$ is the labor force measured in efficiency units. Assume that technological progress causes A to grow at the rate of g_A . In this model the number of efficiency units of labor is growing at the rate $g_A + g_N$. Now, let

 $y = Y/(A \times N)$ stand for output per efficiency unit of labor. The production function, as before, can be written as y = f(k). Equation (1.8), previously modified to (2.1), must now be written as

$$\Delta k = sf(k) - (\delta + g_A + g_N)k. \tag{3.2}$$

The steady-state condition is

$$sf(k) - (\delta + g_A + g_N)k = 0.$$
 (3.3)

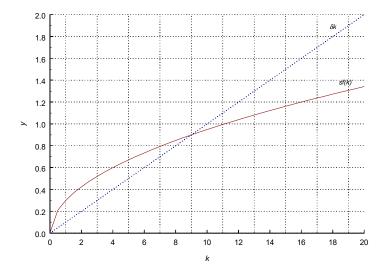

And the Golden Rule saving rate can be obtained by solving (3.3) and

$$dc^*/dk = d[f(k^*) - (\delta + g_A + g_N)k^*]/dk = 0 \implies f'(k^*) = \delta + g_A + g_N.$$
 (3.4)

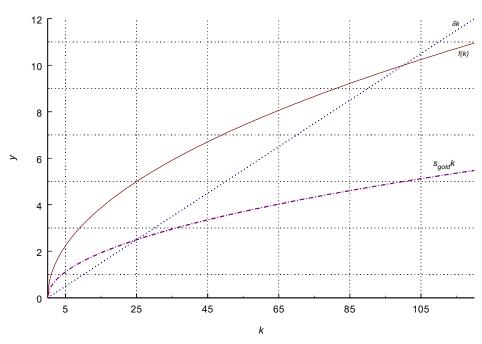

Note that in this version of the Solow model y grows at the rate of g_A in the steady state.

The Basic Solow Growth Model

Let $Y = K^{1/2}N^{1/2}$. We then have $y = k^{1/2}$. Now, let s = 0.30 and $\delta = 0.10$. We get:

The Golden Rule
